

repairing plastic parts

Repairing bodyparts avoids replacing them in cases of small cracks, breaks, splits, scuffs, etc.

MC kit 2

- Created for repairing cracks, breaks, splits and scuffs on composite materials (bumpers, protective plastic for mirrors, Noryl panels,...).
- Excellent adherence on Polypropylene (PP), Polypropylene / Polyethylene (P/E) and all modified Polypropylene (PP/EPDM) materials.
- The main steps to repair are:
 - surface cleaning and degreasing (alkaline cleaner).
 - surface sanding.
 - bonding primer application to obtain optimum adhesion on substrate surfaces.
 - resin application with gun for exterior and interior surfaces.
 - sanding after drying.
 - preparation before painting.

Ixell MC kit strengths:

- Only one universal bonding filler for all materials: Polypropylene, Polypropylene / Polyethylene and modified Polypropylene.
- A competitive price: the kit will repair 6-8 repairs (10 cm cracks).
- Mckit ensures fast quality repairs.

Description	Part No.
MC Kit 2 box	77 11 221 465
1. Cleaner (100ml)	
2. Bonding primer	
3. Filling resin	
4. Repair malting	
5. Mixing nozzles (pack of 4)	77 11 222 097
MC Kit application gun (1 unit)	77 11 221 173
